

A Saliva Test for Endometriosis

Ziwig Endotest

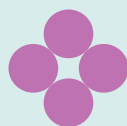

The Ziwig Endotest is a saliva-based test developed in France designed to identify endometriosis.

How Does It Work?

It analyzes 109 salivary microRNAs using next-generation sequencing and machine learning.

What Can the Ziwig Endotest Tell Us?

The saliva-based test is **only** designed to estimate the likelihood of endometriosis.

Where Is It Available?

The test is available in certain locations and at selected providers across:

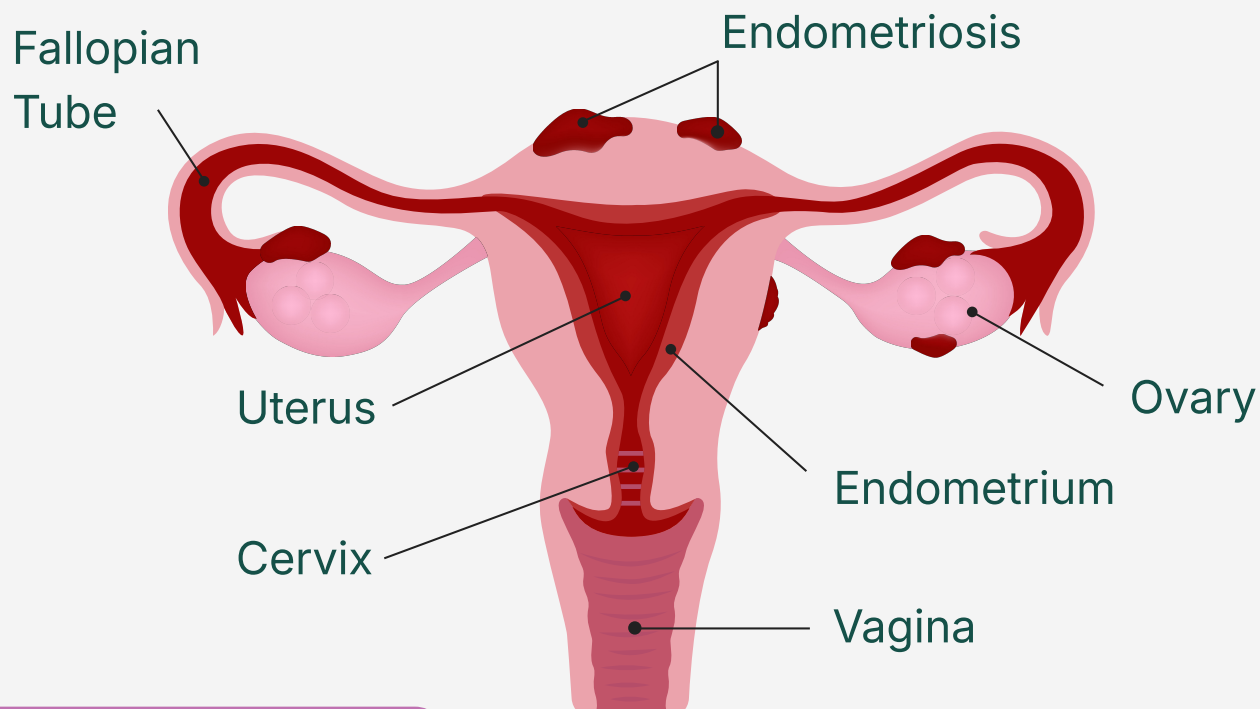

France

Ireland

Canada

England (NHS)

Currently, the Ziwig EndoTest is neither FDA-approved nor available in the United States.

Did You Know?

As many as **6 out of every 10** cases of endometriosis go **undiagnosed**, according to the American Journal of Obstetrics and Gynecology.
