

Condom Catheter FAQs

- 1. Why would you use a condom catheter?

 Your doctor may prescribe a condom catheter if you have urinary incontinence, urinary retention, urinary tract obstructions, enlarged prostate, dementia, or spinal cord or bladder injury.
- 2. How long can a condom catheter stay on?
 Your external catheter should be changed between once a day to every 48 hours.
- How do you sleep with a condom catheter?

 Make sure your catheter is secure to your body and place the drainage bag at a downward angle to prevent backflow.
- 4. Do you need a doctor's order to get a condom catheter?

Yes, you will need a prescription from your healthcare provider in order to prove to Medicare that your external catheter is medically necessary.

Condom Catheter FAQs

- 5. Will a condom catheter hurt?

 No, a condom catheter should never hurt during use. If you experience skin irritation or pain, contact your doctor.
- 6. What is the difference between a condom catheter & an intermittent catheter?

 A condom catheter is placed outside the penis and uses a collection bag while an intermittent catheter is placed into the urethra and drains into a receptacle.
- What are some complications with a condom catheter?

If you manage incontinence and can't empty your bladder on your own, you may need an intermittent or foley catheter rather than a condom catheter.
